Project Name	Visualizing and Predicting Heart Diseases with an Interactive Dashboard
Maximum Marks	4 Marks

Data Flow Diagram:

A data-flow diagram is a way of representing a flow of data through a process or a system. The DFD also provides information about the outputs and inputs of each entity and the process itself.

- A data-flow diagram has no control flow — there are no decision rules and no loops.

- A DFD is a traditional visual representation of the information flows within a system.

- A neat and clear DFD can depict the right amount of the system requirement graphically.

- It shows how the data enters and leaves the system, what changes the information, and where data is stored.
